# Topics for today

## AGENDA:

- Current Release Info:
  - **Release 0.16.4** = Composer release for 'projects' – use with Fabric v1.0.x ie for current projects, PoCs or pilots
  - **Release 0.17.5** = Composer 'next' – use this to try out new **Fabric v1.1 'alpha'** ('fabric.next') features
    - To use the native **NodeJS** Transaction Processor support in Composer
    - If you previously used **0.17.0** → **0.17.2** – do a 'teardown' of '**old**' **1.1-preview** docker containers (tools directory) - use Node-Red to save any data you want to save (eg JSON)
    - This is because **0.17.3** onwards will **NOT** work with v1.1-preview (Fabric) docker containers
- Upcoming Releases:
  - **Release 0.16.5** – will advise when this release is published
  - **Release 0.17.6** - 'next' release for 0.17.x stream is **0.17.6** (due Thurs): As always, latest release info/content will be here – <https://github.com/hyperledger/composer/releases/>
- Agenda:
  - **Improve / Complete the Angular Generator:** <https://github.com/hyperledger/composer/issues/3136> - **Ellis**
  - **Hints and Tips /Multi-Org, multi-machine Fabric environment setup** (to use with Composer) – **Rob**
  - **New Tutorials Added** – OAUTH2 (Google Authentication – published Thurs ) and ACL tutorial (already published) - **Paul**
- @YOU: we'd love you to share your Composer Stories 😊
- GitHub Issues – let us know if something is blocking you !
- Release: more info <https://github.com/hyperledger/composer/releases/>
